Professional Summary

Marine ecologist and environmental scientist with a PhD in biological sciences and applied expertise in benthic monitoring, impact assessment, and data analysis for regulatory compliance. Experienced in designing and delivering offshore and coastal environmental survey and monitoring programmes, translating field and analytical data into regulator-facing reports under EU frameworks (MSFD, Habitats Directive). Skilled in GIS (QGIS, ArcGIS Pro), R-based statistical analysis, eDNA and vessel-based fieldwork. Seeking to apply this expertise in marine EIA and environmental consenting within the offshore energy sector.

Core Skills

- Environmental monitoring programme design (aquatic biodiversity, eDNA, water quality)
- Environmental impact assessment and regulatory reporting
- Data analysis and statistical analysis (R, GIS)
- Technical report writing
- Project Management and autonomous delivery
- Field operations, logistics, and equipment management
- Procurement and supplier management (quoting, budget tracking)
- QA/QC, compliance (WFD, SOPs, regulatory permits)
- Cross-team collaboration and junior staff training
- Client and multi-stakeholder communications (government bodies, crews, consultancies, labs)
- Health and safety and risk assessment
- Driving licence

Professional Experience

Independent Consultant February 2026 – Present

- Delivering structured data evaluation and QA work for research and technology clients, applying analytical rigour from PhD-level data workflows.
- Providing technical and scientific writing services on a contract basis, including manuscript preparation and report drafting.
- Writing peer-reviewed research manuscripts about biodiversity assessment to increase scientific understanding and professional knowledge.

Environmental Consultant – Coastal Waters Monitoring November 2024
University of Aberdeen, Aberdeen

- Applied a PhD-developed workflow to an industrial regulatory contract, standardising sampling logistics for a wastewater permit, demonstrating ability to scale science for commercial application.
- Coordinated delivery across client, labs, vessels, field crews and regulators, ensuring smooth data handover and applied QA checks to reduce rework during data collation.

PhD Researcher – Project WATERMINING (EU Horizon 2020) Aug 2021 – Dec 2024
University of Aberdeen, Aberdeen

- Designed and led field operations and data workflow for an overseas biodiversity monitoring programme across 2 offshore sites (pilot, scaling up to 4 full-scale quarterly sampling events), handling logistics, equipment readiness, data analysis (R, GIS) and reporting across an international consortium.
- Oversaw offshore team sample collection, including staff training, sample processing and chain-of-custody (including eDNA) across 3 countries, with complete documentation.

- Acted as point of contact for stakeholders (government bodies, consultancies, dive crew, students, external partners and labs), and managed compliance requirements (ethical approvals, permits, Nagoya protocol, risk assessments).
- Led authorship of technical reports and peer-reviewed scientific publications, translating field operations into practical scientific knowledge.

Research Assistant – Arctic Connections (Scottish Govt) Mar 2023 – Jun 2023
University of Aberdeen, Aberdeen

- Participated in field research in a remote Canadian Inuit community to produce a white paper of sustainability recommendations.
- Ensured culturally sensitive collection of data, adapting survey tools and collaborating with Inuit elders and municipal authorities in an extreme Arctic environment.
- Co-authored a conservation magazine article on Arctic resilience, reaching national-level readers, advocating for community-based research.

Senior Assistant Scientist – Environmental Fate Apr 2019 – Jul 2021
Charles River Laboratories, Edinburgh

- Conducted environmental fate studies for international clients, working with cross-sector teams to meet client needs under tight schedules.
- Managed purchasing card and procurement system (applying urgency prioritisation), sourcing quotes from various suppliers for custom items, optimising cost and delivery, avoiding stock shortages.
- Liaised directly with clients and external suppliers and trained junior staff.
- Improved operational efficiency by 15% by strengthening protocol checks and improving documentation completeness, while reinforcing learnings after deviations (CAPA).

Continuous Professional Development

Policy Engagement

- Member*, Group of Experts on Water Sustainability and Circularity* (Cyprus): Contributing to policy working groups, providing scientific expertise to shape recommendations on climate resilient water infrastructure, experience directly transferable to marine environmental policy and regulatory advising.

Selected publications:

- Grammatiki K., *et al*. (2025) Environmental impact of brine from desalination plants on marine benthic diatom diversity. *Marine Environmental Research,*210, 107207. https://doi.org/10.1016/j.marenvres.2025.107207
- Grammatiki K., *et al*. (2025) eDNA metabarcoding of marine invertebrate communities at RO desalination plant outfalls in Cyprus. *Marine Pollution Bulletin,*214,117609. https://doi.org/10.1016/j.marpolbul.2025.117609

Selected Presentations & Stakeholder Briefings:

- Presenter**,** EU Project WATERMINING Annual Meeting (2023). Delivered interim findings on biodiversity monitoring methodologies to consortium partners and industry stakeholders.

Education

PhD in Biological Sciences Aug 2021 – Nov 2025
University of Aberdeen, Aberdeen

MSc in Environmental Sciences Sep 2016 – Sep 2017
University of Aberdeen, Aberdeen

BSc in Chemistry Sep 2009 – Sep 2015
Aristotle University of Thessaloniki, Thessaloniki, Greece
